

Advanced Site Acquisition & Permitting Services

Arcom recognizes the many opportunities and challenges faced by new and existing service providers trying to build networks to realize their next generation goals.

The resulting pressure for new transmission sites runs into the real-time bottleneck of the lengthy process of acquisition and permitting.

Arcom has decades of experience helping service providers develop their networks. **Our Site Facilitators have frontline experience developing sites for Canada’s first province-wide rural broadband builds in New Brunswick and Nova Scotia.**

In these ground-breaking rural broadband projects, the main challenge was the acquisition and permitting of high volumes of sites under strict deadlines in a wide variety of rural environments. **This meant stepping out of the box.**

The result is our unique, high velocity A&P Solutions that put in the hands of **dedicated Site Facilitators:**

- a highly-disciplined process covering all aspects of site acquisition and permitting
- an advanced on-line system to manage A&P site information and expedite the permitting Process.

Advantages of this Approach:

Our dedicated Site Facilitators use our process and system to expeditiously take care of all tasks required to acquire the site including; site selection, surveying, land acquisition negotiation, public consultation, and local technical input to permit applications.

The system facilitates development of an accurate site database, multiple site processing, and accurate electronic creation, notices and tracking of permit applications.

This process can be customized to your internal engineering, legal and administrative processes.
